

The minimum viable integration. Initialize the SDK with an `embedCode`, wire the four lifecycle callbacks (`onReady`, `onStepChange`, `onComplete`, `onError`), and the wizard runs end-to-end. Every event fired by the iframe is mirrored in the live event log on the right.

The integration code

Drop this into any HTML page; replace `YOUR_EMBED_CODE`.

```
<!-- 1. The container the SDK will render the iframe into -->
<div id="prx-intake"></div>

<!-- 2. Load the SDK -->
<script src="https://demo.prescribe-rx.com/embed/sdk.js"></script>

<!-- 3. Initialize -->
<script>
  PrescribeRx.init('prx-intake', {
    embedCode: 'YOUR_EMBED_CODE',

    onReady:      (data) => console.log('Ready', data),
    onStepChange: (data) => console.log('Step ' + data.step + '/' + data.total),
    onComplete:  (data) => console.log('Done!', data),
    onError:      (data) => console.error('Error:', data.message),
  });
</script>
```

Live wizard

SANDBOX MODE — TEST TRANSACTION ONLY. No real charges will be processed. Use test card **4111 1111 1111 1111**, any future expiration, any 3-digit CVC.

Event log

Every event fired by the iframe shows up here in real time. Useful for confirming the handshake worked + watching `step-changed` as the user navigates.

```
13:00:51.532 ready {"version":"1.1.0"}
```

Current state

`PrescribeRx.getState()` + `getProgress()` are sync — no `postMessage` round-trip.
