

Sometimes you don't know the exact SKU yet — the patient is requesting "tirzepatide" and the provider will pick the dose + manufacturer at prescribe-time. Use `selectProductTypes` to send the medication TYPE; the wizard renders a placeholder line and the provider swaps in the actual SKU during prescribing. Combine with `setPayment` to record an external transaction your gateway already captured.

The integration pattern

```
// Generic medication type — provider picks the final SKU
PrescribeRx.selectProductTypes([
  { product_type_slug: 'tirzepatide', quantity: 1 },
  { product_type_id: '019d000e-a554-721d-...' } // equivalent
]);

// Payment block — five modes available, see /api/docs/field-mapping
PrescribeRx.setPayment({
  mode: 'reference_captured', // you already charged on YOUR gateway
  gateway: 'stripe', // free-form for record-only modes
  transaction: {
    transaction_id: 'txn_3PqK...',
    amount: 299.00,
    captured_at: '2026-05-01T13:42:00Z'
  }
});
```

Token guard: sales-org and client API tokens cannot use `mode: 'authorize'` — PRX is not the merchant of record on API flows. Use `reference_captured` (you already charged) or `patient_review` (defer to a downstream patient-facing portal). `authorize` is reserved for first-party embed flows where PRX is the merchant.

Try it

[selectProductTypes\(\['tirzepatide'\]\)](#)[setPayment\(reference_captured, \\$299\)](#)[setPayment\(patient_review\)](#)[setPayment\(prepaid\)](#)[Reset](#)

SANDBOX MODE — TEST TRANSACTION ONLY. No real charges will be processed. Use test card **4111 1111 1111 1111**, any future expiration, any 3-digit CVC.

Five payment modes

mode	PRX charges?
authorize	yes (embed only)
reference_preauth	no — vault + record
reference_captured	no — record-only
prepaid	no — out-of-band
patient_review	no — defer to portal
